

VERSION WITH MARKINGS TO SHOW CHANGES MADE

132. (Currently Amended) One or more computer-readable media containing instructions that when executed cause a computing device to perform a method comprising:

sensing information about a current context-physical environment of a user;
under control of a characterization module, using the sensed information about
the current physical environment to characterize the a current context of the user
based at least in part on changes in the sensed information physical environment, the
physical environment changes based at least in part on factors other than prior activities
of the user;

receiving one or more search parameters identified by the user for a search request;

under control of a search criteria generator module, augmenting the received search parameters with additional information from the characterized current context;

receiving information from one or more information sources that satisfies the augmented search parameters; and

providing at least some of the received information to the user.
